

Second circular
Workshop on
Nuclear Track Emulsion and its Future

Predeal, Romania
October 14 - 18, 2013

This is the second circular of the WORKSHOP ON NUCLEAR TRACK EMULSION (WNTE) AND ITS FUTURE, 14-19 October, 2013

This workshop will emphasize the following subjects in both theory and experiment:

1. Nuclear clustering studies with NTE exposed to relativistic radioactive nuclei
2. Implantation of radioactive nuclei in NTE
3. Exposures of NTE to thermal and fast neutrons
4. Exposures of NTE to high energy μ -mesons
5. NTE in laser plasma studies
6. Selected applications in particle and astro-particle (dark matter) physics, neutrinos and double beta decay .

The deadline for registration is September 15, 2013.

There are some changes regarding the venue of the Workshop which will be at Predeal (<http://en.wikipedia.org/wiki/Predeal>) instead of Sinaia. The reason for this change is that we could not find a hotel in Sinaia with availability for all the participants as there are another two very big conferences being held in Sinaia at the same time.

Predeal is a mountain resort town about 25 km away from Sinaia, situated at about 1000 m altitude. The Workshop will take place in Hotel Rosmarin which offers all the necessary services in order to organize the meeting. (<http://www.hotelrozmarin.ro>) If you will have a look at the social program (comming soon!) on the webpage of the WNTE you will see that two sight-seeing visits to Sinaia are scheduled.

The scientific program is not definitive because we don't have yet the proposals from all participants willing to give a talk. That is why we kindly ask you, if you have not done it yet, to add the title and abstract of your communication (or poster) to the website of the workshop on the registration form.

All the communications are plenary and followed by a discussion. There will be a poster session. All participants are invited to take part in the discussions.

The format of the workshop is intended to allow easy and fruitful mutual contact and communication.

The social program will include a welcome party, a meeting dinner, two short visits to Sinaia and a whole day excursion to the surroundings of Predeal.

The website of the symposium is <http://www.spacescience.ro/sinaia2013>.
